STIMULANTS

Crystal Meth

\$330 – \$5,000

Cas Number: 537-46-2

ATC code: N06BA03

PubChem: CID 1206

DrugBank: DB01577

Synonyms: N-methylamphetamine, desoxyephedrine

Formula: C10H15N

Molecular mass: 149.2337 g/mol

Melting point: 3 °C (37 °F) [8]

Boiling point: 212 °C (414 °F) [9] at 760 MM HG

DESCRIPTION ADDITIONAL INFORMATION

What Is Methamphetamine?

Methamphetamine or (N-methylamphetamine) also is popularly known as (buy Crystal Meth) is a powerful, highly addictive stimulant drug that affects the central nervous system. Crystal meth is a form of drug that looks like glass fragments or shiny, bluish-white rocks. It is chemically similar to amphetamine, a drug used to treat attention-deficit hyperactivity disorder (ADHD) and narcolepsy, a sleep disorder.

Other common names for methamphetamine include blue, crystal, ice, meth, and speed.

Because the “high” from the drug both starts and fades quickly, people often take repeated doses in a “binge and crash” pattern. In some cases, people take methamphetamine in a form of bingeing known as a “run,” giving up food and sleep while continuing to take the drug every few hours for up to several days.

How does methamphetamine affect the brain?

It increases the amount of natural chemical dopamine in the brain. Dopamine is involved in body movement, motivation, and reinforcement of rewarding behaviors. The drug’s ability to rapidly release high levels of dopamine in reward areas of the brain strongly reinforces drug-taking behavior, making the user want to repeat the experience.

Methamphetamine Side Effects

Taking even small amounts of methamphetamine can result in many of the same health effects as those of other stimulants, such as cocaine or amphetamines. These include:

- 1- Increased wakefulness and physical activity
- 2- Decreased appetite
- 3- Faster breathing
- 4- Rapid and/or irregular heartbeat
- 5- Increased blood pressure and body temperature

How does Crystal Meth work?

Crystal Meth increases the amount of the neurotransmitter dopamine, leading to high levels of that chemical in the brain. Dopamine is involved in reward, motivation, the experience of pleasure, and motor function. Methamphetamine’s ability to release dopamine rapidly in reward regions of the brain produces the euphoric “rush” or “flash” that many users experience. Repeated methamphetamine use can easily lead to an addiction chronic, relapsing disease characterized by compulsive drug seeking and use.

Where to buy Crystal Meth online

We give you the guarantee to secure your chances of benefiting safe and secure delivery. CRYSTAL-METH is high-quality research are coming now from the mostly U.S, MEXICO and BRAZIL with also the possibility of secure delivery and do not have any side effect associated with it. it is 99% pure and of course, can be smoked.is highly use by fellas from the, U.S.A Europe, and some parts of Asia. we have been providing countless kilograms every week which shows that our quality is number one in the market. Over the last few years, our demand for meth rose rapidly but this does not mean that we don't provide in small quantities.
